

Date Wrangling Instructions:

Once the tables are loaded and you are connected to the MicroStrategy using the new user “c##mstr”, you can use the following steps to wrangle the dates as they do not come in a formatted manner. These steps will help you calculate the days between two dates and will also display date in a proper formatted manner.

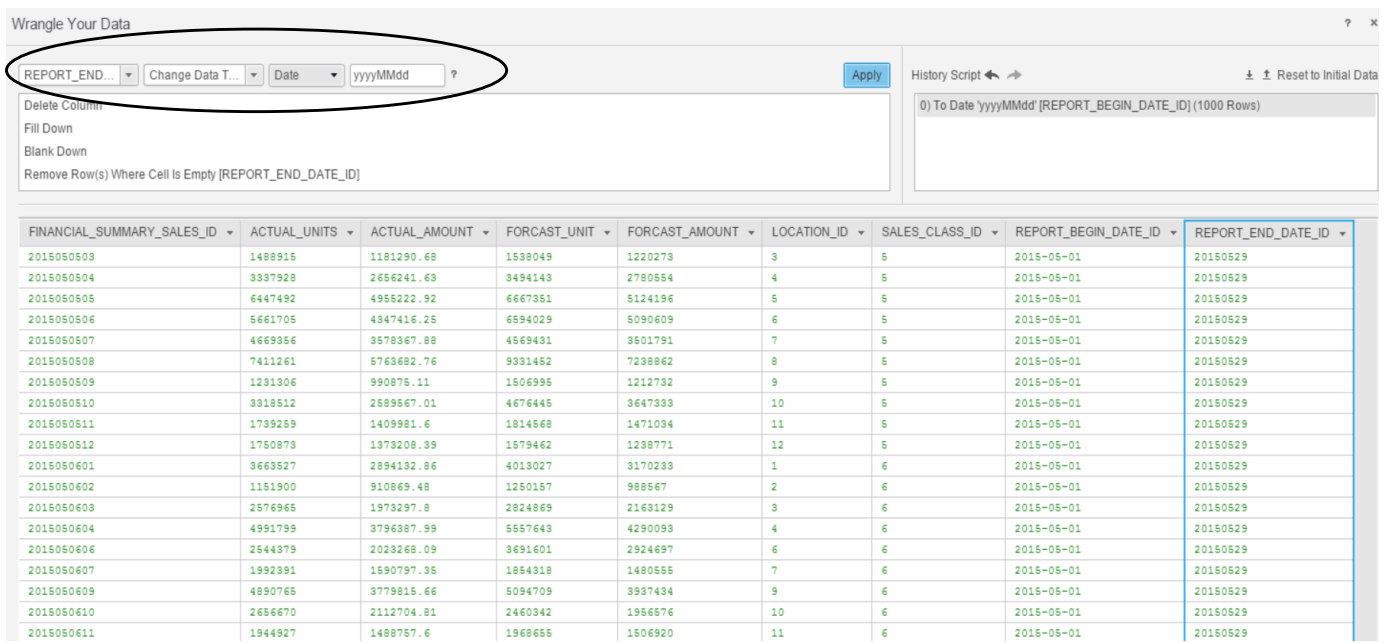

Here are the steps:

1. During the import process, select the fact table, then select “Expand Preview” (bottom left) and select “Wrangle” (Middle right)

2. On the “Wrangle your data” page

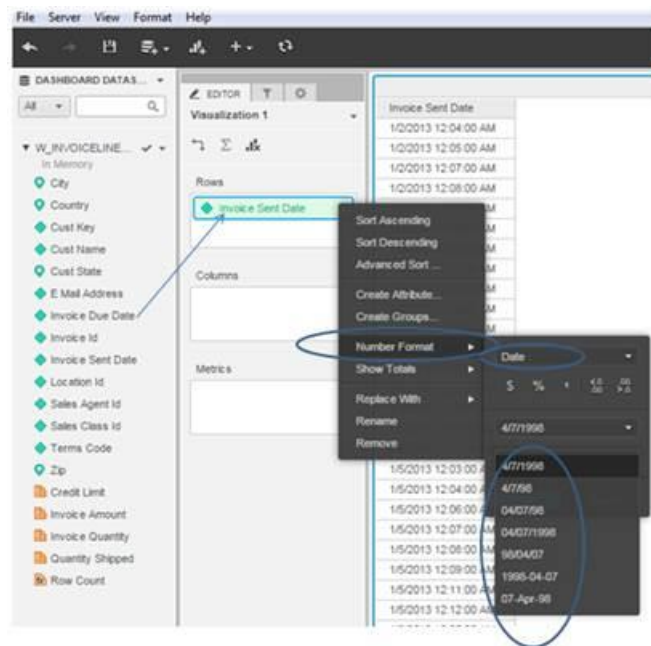

Select your Date column, Select your function as “Change Data Type” to “Date” and format “yyyyMMdd”, and click on apply.

The above steps changed the “invoice sent date” to a date format as seen below

REPORT_BEGIN_DATE_ID
2015-05-01
2015-05-01
2015-05-01
2015-05-01
2015-05-01
2015-05-01
2015-05-01
2015-05-01

Once the file is imported, you will want to change the formatting to your preferred format instead of datetime:

The aggregation option for each date column is now also available with “Create Time Attributes”:
